

Vishwa Karan Reddy Belaganti

vishwakaranb@gmail.com | 737-330-7882 | linkedin.com/in/vishwa-belaganti | github.com/vishwakaran12

Highly analytical Computer Science Honors student and Full Stack Developer with practical experience engineering distributed React, Node.js, and Python FastAPI applications. Proven expertise in optimizing relational and non-relational databases, automating workflows, and deploying high-performance AI integrations.

EDUCATION

Texas Tech University, Honors College

Bachelor of Science in Computer Science, Minor in Mathematics

Expected May 2027

GPA: 3.96/4.0

Honors: President's Honors List (4 Semesters), Dean's List, Terry G Myers Scholarship

PROFESSIONAL EXPERIENCE

Automation Intern | CtrlS Datacenters

July 2026 - Present

- Engineered a Configuration Management Database (CMDB) application utilizing 3D visualization for datacenter site-to-VM navigation.
- Architected a centralized Material Management System (MMS) to optimize inventory control and streamline procurement workflows.
- Executed large-scale database migrations from MySQL to PostgreSQL to maximize query performance and system reliability.
- Implemented secure, multi-tenant Role-Based Access Control (RBAC) schemas leveraging PostgreSQL and MongoDB.
- Designed and implemented interactive user interfaces for system performance monitoring and streamlined administrative navigation.

Grading Assistant (Data Structures) | Texas Tech University

September 2025 - January 2026

- Evaluated technical code submissions for over 180 Computer Science students to ensure high programming standards.
- Analyzed algorithms for execution efficiency, handling edge-cases across structures like Trees, Graphs, and Linked Lists.

TECHNICAL PROJECTS

Codet - AI Job Prep & Application Copilot

React 18, Node.js, FastAPI, MongoDB Atlas, Playwright, Gemini API

- Architected a robust microservices platform with a React 18 frontend and lightweight Python FastAPI services.
- Automated background browser operations with Playwright and Manifest V3 to expedite application form workflows.
- Integrated Gemini 2.5 Flash API to parse complex PDFs and deliver real-time, format-preserving ATS optimizations.
- Engineered a simulated interview sandbox loaded with 13,000+ technical problems and instant STAR feedback loops.

PROIBE - Beautiful Note-Taking Platform

Next.js, Firebase, Google Gemini API, JavaScript

- Developed an interactive block-based markdown editor featuring fluid drag-and-drop mechanics for custom page structures.
- Integrated Google Gemini models to generate high-quality, contextual summaries of long-form text notes.
- Built a specialized client-side PDF rendering engine to export polished, print-ready, and responsive documents.

SKILLS

languages: TypeScript, Python, JavaScript, SQL, HTML/CSS

frameworks: React 18, Next.js, Node.js, Express.js, FastAPI, TailwindCSS, PyTorch

databases: PostgreSQL, MongoDB Atlas, MySQL, Firebase

tools: Playwright, Chrome Extension Manifest V3, Gemini API, PyPDF2, Git, NumPy
